---	---

- My webpage is a charitable donation of food to children in need. You can choose from 10 food items.
- I used bootstrap grid system to lay out the items using col-x. I also used bootstrap buttons, making it look more alive and well rounded. The add to cart buttons use a javascript function addtocart() which takes the name and price of the selected item, trims out the needed info and appends it to a new div which is the shopping cart.
- It also adds together the prices of the items to calculate the total cost.

# The cart

**Donate food to children in need!**  
*Each meal will be given to a starving child.*

Three food items are listed:

- Chicken breast with potatos - 9.50€ (+Tax) **Add to cart!**
- Crepes with fruit - 5.00€ (+Tax) **Add to cart!**
- Fried potatoes - 12.50€ (+Tax) **Add to cart!**

A floating modal window titled "Your cart:" shows the items added:

- Crepes with fruit - 5.00€
- Meatball spaghetti - 7.90€
- Roasted chicken with fries - 10.20€

Your total is: 23.10€ **Checkout**

**Donate food to children in need!**  
*Each meal will be given to a starving child.*

A floating modal window titled "Your cart:" shows the items added:

- Chicken breast with potatos - 9.50€
- Crepes with fruit - 5.00€

Your total is: 14.50€ **Checkout**

**Add to cart!**

**Crepes with fruit**

- For the cart display i used a bootstrap feature collapse, making it look much better than if it just appeared.
- Inside the cart are all the items the buyer selected, along with the total. The total does not yet contain tax or the discount, it is calculated at checkout.

# Checkout

The image displays three screenshots of a checkout interface. The top-left screenshot shows the 'Shipping Information' form with fields for First name (Christian), Last name (Markovic), City (455), Country (Austria), Zip code (62586), Phone number (445865224566f), and Email address (25IMC101131@fh-krems.ac.at). The bottom-left screenshot shows the 'Payment Information' form with fields for Name on Card (Christian Markovic7), Card Number (8747848488481818), Expiration Date (5288), CVV (875), and Email address. The right side of the image shows two separate forms: 'Shipping Information' and 'Payment Information', which are typically combined into one page but shown here separately.

- After clicking checkout in the cart, the display: will change to none for the items and change to block for the forms, using the function hide() and onclick with the button.
- It also displays a previously hidden back to home page button which takes you back to the beginning but doesn't delete the cart.
- The forms were created with bootstrap, and the form validation has also been made with bootstrap, making the total bootstrap features 5.
- The validation was made either with just a bootstrap type like in the email which has a built in validation. Others were validated with manual restrictions by specifying the allowed characters and length.
- The pay button already contains the total amount to pay including tax and discount. The calculation breakdown is in the summary.

# Summary of the order

[Back to home page](#)

## Payment Successful!

You will receive confirmation via email.

### Summary of Your Order:

Crepes with fruit - 5.00€  
Meatball spaghetti - 7.90€  
Roasted chicken with fries - 10.20€  
**Subtotal: 23.10€**  
**Tax (20%): +4.62€**  
**Discount (15%): -3.47€**  
**Total: 24.26€**

- After paying, a summary page is displayed. It shows the items purchased as well as a breakdown of the costs, tax and a discount applied when ordering 3+ items. The prices were calculated using javascript.
- All of the steps where different elements appear and disappear were made with display: being changed on different button clicks which hide or show selected divs
